Welcome

This guide will help you to quickly set up your air conditioner so you can use all its connected features.

With the Kelvinator Home Comfort app you can confidently know that you can monitor & adjust its temperature from the palm of your hand wherever you may be.
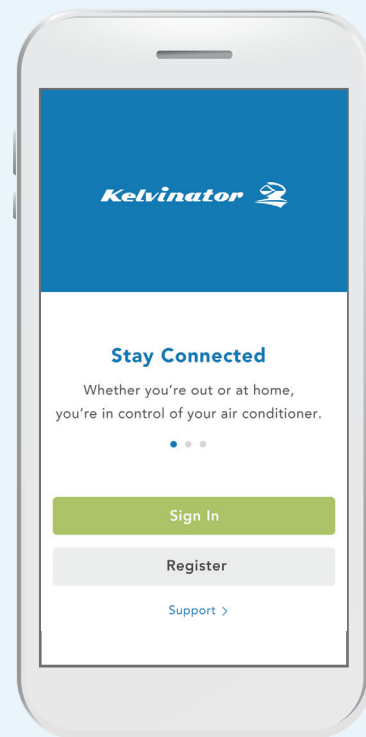

1. Download the Kelvinator Home Comfort App for free now.

Minimum requirements: iOS 7.0, Android 4.0 and above.

*You will need to install the Kelvinator Home Comfort app, create an Kelvinator account and accept the Terms and Conditions and Privacy Policy in the app to use the connected features of the appliance. Internet and Wi-Fi connections are required to use the full features of the app and the air conditioner.

Minimum requirements, apps and services are subject to change without notice.

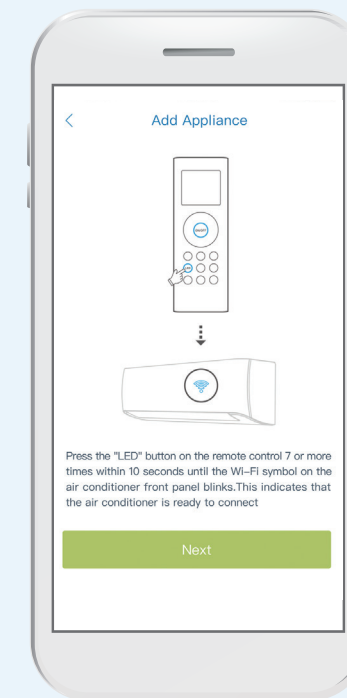

2. Create a Kelvinator account

Select 'Register' and follow the prompts to create a Kelvinator account*. Multiple users can control the same air conditioner. Each user must register their own Kelvinator account, then use the "appliance sharing" feature within the app to share control of the air conditioner.

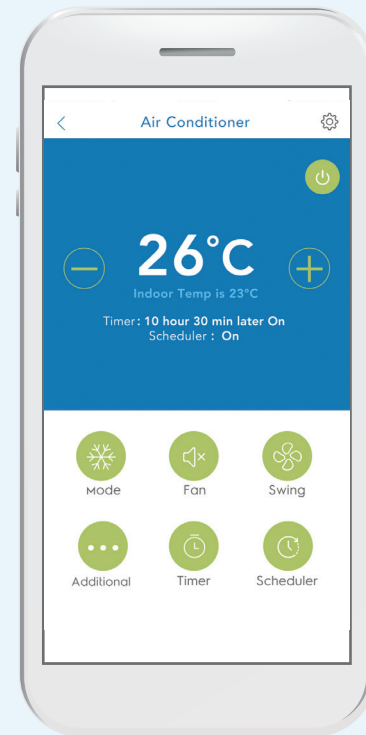

3. Getting started

Ensure that your smart phone is connected to the same 2.4GHz Wi-Fi network that you want to connect your appliance to.

We recommend to turn off your mobile data at this point to ensure your connection is via the Wi-Fi network and have your Wi-Fi network password ready.

4. Connecting appliance to Wi-Fi

Press the "LED" button on the remote control 7 or more times within 10 seconds until the Wi-Fi symbol on the air conditioner front panel blinks. This indicates that the air conditioner is ready to connect.

Congratulations

Enjoy the comfort of your Kelvinator air conditioner.

The Kelvinator Home Comfort App allows you to conveniently control your air conditioner anywhere, anytime from your smart device.

Change temperature, turn the unit on & off, and create custom schedules to enable you to control the comfort of your room.

Great for cooling or heating your room before you get home after a day out.
